

Abstract: Optimizing Your Existing Drying Systems

Presenter: Dan Bemi, Regional Sales Manager, Megtec Systems, Inc.

Are your coating and laminating dryers limiting production throughput? Are process energy costs eating away at your profitability? Does your drying process create product defects that result in waste or unhappy customers? If you answered yes to any of these questions, this presentation will be of interest to you.

Learn how to optimize your existing drying equipment so as to eliminate costly product defects, reduce energy costs and increase production throughput. The presentation will review current best operating practices and equipment upgrade opportunities as they relate to forced convection air drying technology. Topics will include; exhaust air recirculation loops, energy recovery equipment, efficiency gains through process automation, and other helpful tips to improve the operation and reliability of your existing drying systems.
